

# Replication just got a lot better!

As a Rocket® UniData user, if you rely on Replication or have been waiting for the next big thing in Replication, it's here! Introducing Rocket UniData 8.3.2 with version 1.10 of the MultiValue Performance Experience! Replication is a crucial aspect for organizations with business-critical UniData applications, especially for ensuring High Availability/Disaster Recovery (HA/DR) strategies and seamless upgrades. Check out the great new features and fixes that make our latest Replication solution superior.

## UniData Product Benefits

List of Features	UniData 8.2.1	UniData 8.2.2 - 8.2.4	UniData 8.3.1 - 8.3.2
Replication asynchronous cross-group transactions (CGTs) <a href="#">Release Notes (see page 3)</a>	✓	✓	✓
Delayed Replication <a href="#">Release Notes (see page 12)</a>	✓	✓	✓
Field-level replication <a href="#">Release Notes (see page 3)</a>	✓	✓	✓
Increased replication config parameter default values <a href="#">Release Notes (see page 10)</a>		✓	✓
Repmanager restart option <a href="#">Release Notes (see page 5)</a>			✓
Replication error message improvements <a href="#">Release Notes (see page 9)</a>			✓

## MVX: Performance Product Benefits

REPLICATION-RELATED EVENTS	MVX: P MVX: P 1.10	Notes
Replication suspended event	✓	Generated when replication has been suspended
Replication log usage event	✓	Generated when replication log file usage is higher than the <repLogUseTriggerThreshold>
Replication pacing event	✓	Activated when the replication process detects that the publisher is generating updates faster than updates can be applied to the subscriber
Replication subscriber stalled event	✓	Generated when replication subscriber updates are being blocked
Replication subscriber lag event	✓	Generated when the replication subscriber lag time exceeds three minutes
Replication suspended by group event	✓	Generated when replication has been suspended for a group
Replication disabled event	✓	Generated per distribution with the primary server if any groups are disabled
Replication down event	✓	Generated per distribution with the primary server when replication is down
Replication up event	✓	Generated per distribution with the primary server if replication's previous state was either disabled or suspended
Replication Historical Charts	✓	Interpreting replication analytics charts

\* To take advantage of MVX: P 1.10, you must be running UniData 8.3.2

## Ready to upgrade?

Learn more about replication and how it and MVX: Performance are part of a superior HA/DR strategy for Rocket UniData 8.3.2.
